Base cases

Base cases

Base cases

UC1: Login

Actor: All Users

Goal: Authenticate and gain access to the system.

Precondition: User has a registered account with a valid company email.

Main Flow

1. User navigates to the login page.
2. User enters their company email and password.
3. System validates credentials against the registered account.
4. System generates a 6-digit OTP and sends it to the user's email.
5. User enters the OTP on the verification screen.
6. System validates the OTP and checks it has not expired (5 minute window).
7. System grants access and redirects to the dashboard.

Base cases

UC2: Register

Actor: All Users

Goal: Create a new user account tied to a valid company email.

Precondition: User has a valid company email address. Registration page is publicly accessible.

Main Flow

1. User navigates to the registration page.
2. User enters first name, last name, company email, and password.
3. System validates that the email belongs to an accepted company domain.
4. System creates the account and sends a verification email.
5. User clicks the verification link in their email.
6. Account is activated and user is redirected to the dashboard.

Base cases

UC3: Profile & Settings

Actor: All Users

Goal: View and update personal profile information and system preferences.

Precondition: User is authenticated.

Main Flow

1. User navigates to their profile page via the top navigation or avatar menu.
2. System displays the current profile details and preferences.
3. User updates any editable fields and saves.
4. System validates and persists the changes.
5. System confirms with a success notification.

UC4: Log & Manage Time Entries

UC4: Log & Manage Time Entries

Actor: Developer

Goal: Record time worked against projects and tasks, and manage those entries.

Precondition: User is authenticated as a Developer and has at least one project assigned.

Main Flow

1. User navigates to the time logging page.
2. User clicks "Add Time Entry".
3. System presents the entry form.
4. User selects a project from the dropdown (populated with assigned projects only).
5. User selects a task from the dropdown (populated based on selected project).
6. User enters a start time and end time.
7. User enters an optional description.
8. User saves the entry.
9. System calculates duration from start/end time and saves the draft entry.
10. The entry appears in the current day's time log.

UC5: View & Track Timesheets

UC5: View & Track Timesheets

Actor: Developer

Goal: Review all time entries for the week, monitor hours progress, and track timesheet approval status.

Precondition: User is authenticated as a Developer.

Main Flow

1. User navigates to the Timesheets page.
2. System displays the current week's time entries grouped by day.
3. System displays the weekly hours progress bar showing total logged hours out of the weekly target (default 40h, configurable).
4. System shows remaining hours needed to reach the target.
5. User can click on any entry to view its full detail.
6. User can view approval status of each timesheet entry.

UC6: Reports & Productivity

UC6: Reports & Productivity

Actor: Developer

Goal: Generate and review productivity reports based on logged time entries within a selected date range.

Precondition: User is authenticated as a Developer and has at least one time entry logged.

Main Flow

1. User navigates to the Reports page.
2. User selects a date range using the from/to date pickers.
3. System fetches all time entries within that period belonging to the user.
4. System displays the report with: total hours, time distribution by category, and productivity trend.

UC7: Submit Timesheet

UC7: Submit Timesheet

Actor: Developer

Goal: Submit the week's completed time entries for manager approval.

Precondition: User is authenticated as a Developer and has at least one draft entry for the week.

Main Flow

1. User navigates to the Timesheets page.
2. User reviews the week's draft entries.
3. User clicks "Submit Timesheet".
4. System validates all entries are complete and the week has not already been submitted.
5. System changes all draft entries for that week to status: Submitted.
6. System locks the week from further editing.
7. System notifies the user's manager that a timesheet is pending review.
8. System confirms submission with a success message.
