Business Need

Momentum Life's IT department currently utilizes TMetric for time tracking. However, this system only captures basic hours and lacks the enterprise-level reporting, seamless integrations, and intelligent analytics required to optimize software team performance.

The Problem

- The current solution operates independently of core development tools like Jira and GitHub. Developers must manually duplicate effort to log time, which is error-prone and creates unnecessary administrative overhead.
- While management can track how many hours are logged, they **lack granular, data-driven insights** into where that effort is allocated across specific projects, tasks, and business functions.
- Without automated **anomaly detection or productivity trend analysis**, managers cannot proactively identify bottlenecks, optimize resource allocation, or accurately assess team efficiency.

The Solution & Business Value

Momentum Life requires a **scalable, intelligent time-tracking and analytics platform**. Momently addresses this need by automating time capture, integrating directly with existing IT infrastructure, and leveraging AI to surface productivity insights. By eliminating the friction of manual tracking, Momently empowers developers to focus on software delivery while providing management with the visibility required to lead high-performing teams and make data-backed operational decisions.

Functional Requirements

1. Authentication & Access Management

1.1 User Registration

- **FR 1.1.1:** The system shall allow users to register by providing their first name, last name, company email, and password.
- **FR 1.1.2:** The system shall validate the provided email against a list of accepted company domains, rejecting unauthorized domains.
- **FR 1.1.3:** The system shall enforce a password policy requiring at least 8 characters, one uppercase letter, one number, and one special character.
- **FR 1.1.4:** The system shall activate the user account only after the user clicks a valid, unexpired verification link.
- **FR 1.1.6:** The system shall automatically assign the "Developer" role to all newly registered users

Functional Requirements

1. Authentication & Access Management

1.2 User Login & Security

- **FR 1.2.1:** The system shall authenticate users using a valid company email and password combination.
- **FR 1.2.2:** The system shall temporarily lock an account after 5 consecutive failed login attempts.
- **FR 1.2.3:** The system shall provide a "Remember Me" feature that persists the active session for 30 days on a specific device.
- **FR 1.2.4:** The system shall provide a password reset workflow, sending a reset link within 60 seconds of a valid request.

Functional Requirements

2. Time Tracking & Management

2.1 Time Logging

- **FR 2.1.1:** The system shall allow developers to create time entries by selecting a project, a task, a start time, and an end time.
- **FR 2.1.2:** The system shall populate the project dropdown only with projects the user is explicitly assigned to.
- **FR 2.1.3:** The system shall dynamically populate the task dropdown based on the selected project.
- **FR 2.1.4:** The system shall calculate the duration of the time entry server-side; manual duration entry must not be permitted.
- **FR 2.1.5:** The system shall prevent the creation of time entries for future dates, or entries where the end time is before or equal to the start time.

Functional Requirements

2. Time Tracking & Management

2.2 Live Timer Functionality

- **FR 2.2.1:** The system shall provide a live timer that displays elapsed time in HH:MM:SS format, updating every second.
- **FR 2.2.2:** The system shall allow the user to pause and resume the active timer without losing the elapsed time.
- **FR 2.2.3:** The system shall restrict a user to only one active timer at any given time.
- **FR 2.2.4:** The system shall automatically generate and save a draft time entry when the timer is stopped.

2.3 Draft Management

- **FR 2.3.1:** The system shall allow users to edit or delete draft time entries.
- **FR 2.3.2:** The system shall strictly prevent the editing or deletion of entries that are in a "Submitted" or "Approved" state.

Functional Requirements

3. Timesheet Tracking & Submission

3.1 Timesheet Viewing

- **FR 3.1.1:** The system shall display the user's current weekly time entries grouped by day.
- **FR 3.1.2:** The system shall provide a progress bar displaying the total logged hours against a configurable weekly target (defaulting to 40 hours).
- **FR 3.1.3:** The system shall dynamically update the weekly progress bar whenever an entry is added, edited, or removed.
- **FR 3.1.4:** The system shall visually distinguish the approval status of each entry using color-coded tags (Draft, Submitted, Approved, Rejected).
- **FR 3.1.5:** The system shall display inline manager feedback and reasons for any rejected timesheet entries.
- **FR 3.1.6:** The system shall allow users to filter their timesheets by project or status, and navigate between past and present weeks.

Functional Requirements

3. Timesheet Tracking & Submission

3.2 Timesheet Submission

- **FR 3.2.1:** The system shall allow developers to batch-submit all draft time entries for a given week for manager approval.
- **FR 3.2.2:** The system shall change the status of all submitted entries to "Submitted" and lock the week from further editing.
- **FR 3.2.3:** The system shall automatically notify the developer's manager when a timesheet is submitted.
- **FR 3.2.4:** The system shall allow developers to correct and resubmit previously rejected timesheets.
- **FR 3.2.5:** The system shall disable the submit function if a week contains no entries or if entries are missing required fields.

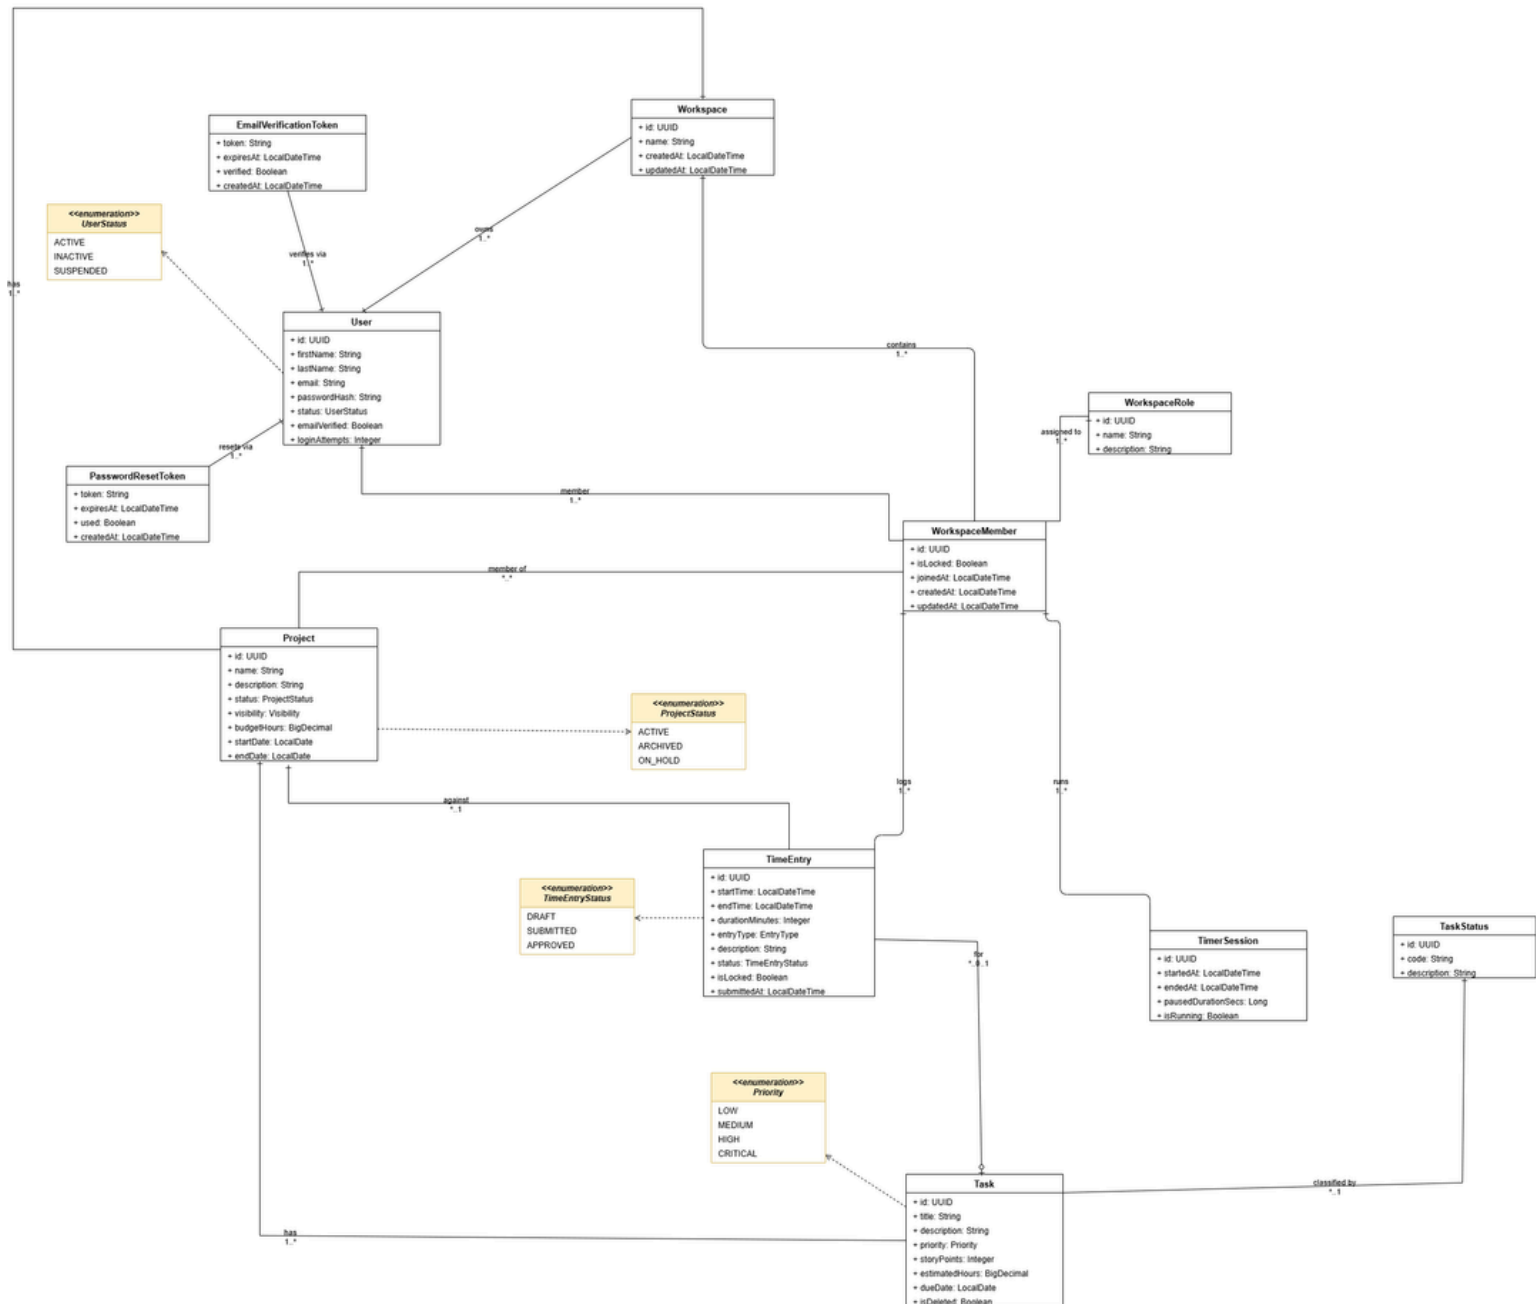

Functional Requirements

4. Reporting & Analytics

4.1 Productivity Reports

- **FR 4.1.1:** The system shall allow developers to generate productivity reports based on a user-defined date range.
- **FR 4.1.2:** The system shall aggregate and display total hours, time distribution by category, and productivity trends for the selected period.
- **FR 4.1.3:** The system shall generate and render reports within 5 seconds for date ranges spanning up to 12 months.
- **FR 4.1.4:** The system shall provide quick-select date range options that automatically trigger report generation.
- **FR 4.1.5:** The system shall ensure users can only generate reports based on their own time entries.
