

API Service Contract

Version: 2.3

Last Updated: 30 September 2026

Prepared by

OpenAPI (RestAPI Contract)

This API service contract was generated directly from the Timesheets AI backend using OpenAPI/Swagger. Annotations were added to the endpoints to describe the endpoints, the requests, status codes and error messages.

Springdoc uses these annotations and the existing DTOs to generate the full contract through `/v3/api-docs`. The generated JSON was then downloaded and formatted into `docs/openapi.json`. The contract is generated from the actual API, hence the file is quite long as it contains all the documented endpoints and schemas.

Command used:

```
curl -s http://localhost:8080/v3/api-docs | jq '.' > docs/openapi.json
```

```
